

Weekly Market Review October 10, 2024

Overview

HURRICANE HELLENE MILTON: As you have all seen in recent days, the devastation and impacts from Hurricane Hellene are being felt across the entire Southeast and now Florida has taken a direct hit by Hurricane Milton; we continue to keep those in harm's way in our thoughts and prayers. Based on these two events we expect the supply of fresh produce from South Georgia and Florida to be extremely volatile. In Florida, it's too soon to assess but the damage to crops and infrastructure will be severe. Commodities certain to be immediately impacted are the following: Citrus, Corn, Cotton, Tomatoes, Soft Squash, Bell Pepper, Eggplant, Peanuts, Pecans, Mixed Hot Pepper, Greens, Cabbage, Strawberries and Green Beans to name a few. We are working with our partners to keep you updated and appreciate your patience during these difficult times.

OTHER MARKET NOTES: Current table grape supply and demand out of California remain strong, however we do feel the season will come to a close early due to heat related crop losses. We do see the potential GAP in Nov/December. Pineapples continue to be short, and shippers are asking to be flexible on sizing to navigate the shortfalls. In the West, tighter supply available to market on mushrooms; weather impacts and viral pressure have caused supply shortfalls across the region on all varieties. Growers are hoping this will improve over the next six weeks. Lime volume is improving, but overall remains lighter than normal. Quality is improving as well as we are seeing new crop limes starting to cross from Mexico. Sizing will be heavy on small sizes as we transition from old crop to new crop. The supply chain is gradually regaining the momentum lost due to last week's rain market. Despite strong daily harvest figures, overall inventory levels in the US are on the decline. With many retail stores participating in AD promotions last week, it is essential for overall volumes to surpass 50 million pounds per week to maintain a reasonably priced and stable market. Fortunately, forecasts for the next three weeks from Mexico indicate an average of 56 million pounds per week, which should facilitate a lower-priced market from late October through the fourth quarter, aligning price points more closely with previous years. The primary challenge in the coming month will be managing the size curve as it adjusts with the transition from Loca to Aventajada harvests. Currently, the size curve for Aventajada is yielding smaller sizes than anticipated, a situation that can also be linked to the recent late rains. However, with consistent sunshine, the fruit is expected to increase in size rapidly. The topic in the Salinas Valley right is warmer than normal weather! A Market Alert was sent out on this so everyone should be aware of any possible issues that may arise in the next few weeks. Growers are doing their best to handle the situation, but harvesting has definitely decreased due to the heat and we will see some supplies start to decrease. To mention, the weather in Yuma has also been very hot so some of the earlier crops in Yuma could be affected. At the moment, there's no confirmation on that but the report will be updated once there's feedback from the growers. Endive, escarole, leeks, cilantro and fennel are still escalated. Bok Choy has also stayed at the extreme trigger. It continues to be very light on supplies. Leeks and Broccolini have also gotten very light. Growers will be holding to averages on those items. Green onions and Artichokes are also still at the extreme trigger and are extremely tight. Expect these to stay escalated throughout the month of October. Expect to see growers holding to averages on artichokes. For green onions, we still have growers who do not have any product at all. A market alert was sent out and we can expect quality and supply issues to last through October. Broccoli is still escalated and there is some insect intrusion that is limiting what will be harvested. The Diamondback moth is still a large issue in the valley, and it is still affecting the broccoli, cauliflower and the cabbage fields. Expect the effects of the moth to run through the rest of the Salinas season. Green Cabbage is still escalated and will be for at least a few more weeks. Supplies will be limited on all cabbage items. There are some growers that will be prorating on shredded cabbage, but we should be fine on contract business. Open market business is likely being prorated or allocated to averages. Lastly, Spinach is now escalated. There are tight supplies and some insect damage. Some growers may be prorating. In summary, the heat and the Diamondback Moth are going to cause a lot of issues over the next few weeks. October is going to be riddled with issues. We will keep an eye on the heat and will keep everyone updated, but with transitions around the corner, the Diamondback moth and with the heat in the mix, October is going to be a hectic month for the industry as a whole. Excessive heat in the San Joaquin Valley citrus growing areas have heavily affected supplies on the Valencia orange. Most shippers are reporting probable "Gaps" in production between now and the beginning of the Navel season.

Alert List

- Asparagus – **ESCALATED**
- Artichokes – **EXTREME ON SOME SIZES**
- Avocados – **ESCALATED**
- Bell Pepper (Green) – **ESCALATED**
- Blueberries – **EXTREME**
- Bok Choy – **EXTREME**
- Broccoli Florets and Crowns – **ESCALATED**
- Cabbage-Green-**ESCALATED-ADD**
- Cilantro – **ESCALATED**
- Endive and Escarole – **ESCALATED**
- Fennel, Anise – **ESCALATED**
- Green Onions –**EXTREME**
- Hot Peppers (Yellow Caribe, Habanero, Shishito) – **ESCALATED**
- Leeks – **ESCALATED**
- Limes – **EXTREME ON LARGE SIZES**
- Mushrooms – **ESCALATED**
- Napa – **ESCALATED**
- Lemons – **EXTREME ON SMALL SIZES**
- Oranges (Valencias) - **EXTREME**
- Parsley (Italian) – **ESCALATED**
- Pineapple – **ESCALATED**
- Spinach-**ESCALATED**
- Slicer Cucumber
- Strawberries – **ESCALATED**
- Tomatoes (Rounds, Romas and Snacking Tomatoes) – **EXTREME**

Watch List

- Arugula
- Bananas
- Broccolini
- Corn
- Cabbage - Red
- Cauliflower
- Eggplant
- Ginger
- Green Beans
- Lemons

- Lettuce Iceberg
- Lettuce Romaine and VA Blends
- Lettuce Green Leaf and Red Leaf
- Melon – Honeydew
- Snow Peas & Sugar Snap Peas
- Soft Squash

Fruits & Vegetables

Avocados: ESCALATED Last week closed at 49.3M pounds, with Mexico down 10% in volume over the previous week. Additional rain delays and a holiday with no harvest last week explain the reduction in volume. Harvest is tracking extremely well to begin this week, and Mexico could easily surpass the 53.8M pounds projected for the US this week. Chile has started its season strong, and while the majority of its fruit stays in-country and supplies Europe, the US market is strong enough to support almost 7M pounds imported over the past five weeks. Volume for last week out of California was still over 1.3M pounds, and the total for the season is up to 344M pounds, which is 53% higher than 2023 and 165% higher than initial 2024 projections. The size curve is trending toward 48 counts and larger. The dry matter is averaging 26.4%

Bananas: Supply remains stable at the moment and shortages were averted as the strike has been postponed. Over quality remains good across the country.

Pineapples: ESCALATED Supply will remain very light for the next 6 to 8 weeks minimum due to harvest shortfalls; we need to be flexible on sizing as 5-6ct fruit is very short with 7-8's plentiful. The need to be flexible on sizing may be necessary to maintain consistent supply. Quality is good.

Table Grapes: Excellent supply will be available out of California this week. Quality out of California is mostly good as the crops are taking the heat wave better than expected. We are getting concerned the end of the season could fall short due to crop loss.

Berries

Strawberries: ESCALATED Supplies remain lighter this week due to the past wave and lower overall fruit. This week's weather is cooler out of Watsonville/Salinas, with daytime temperatures in the high 60s to low 70s and nighttime temperatures in the mid-50s. Production has been declining steadily and quickly, though staying high in quality. Overall production should be ending towards the beginning of November. The sizing has decreased a bit. Growers see darker, softer, smaller, and overripe fruit issues. Both methods have good sheen, small-to-medium size, strong red color, and good flavor. Labor is tight. This week it cooled down a bit into the mid-70s out of Santa Maria. Production has been strong this week as we have entered our peak production for the next few weeks through mid-October. Fruit quality is high, but we are closely monitoring quality issues stemming from the heat and sun. Packs are nice in shape, color, and firmness, though we are seeing issues with bronzing, bruising, overripe, and soft fruit. Most blocks are showing good shape, but even these blocks are showing signs of soft and bruised fruit as well. Overall appearance looks decent, and crews are working hard to sort through small, crooked, bronzed, and soft fruit. SC organics continues to be steady in the coming weeks. No labor issues.

Blackberries: Quality is decent, with sizing between the medium to large range, good sheen, mostly black and with good firmness. Growers see red cell regression in some ranches and soft, leaking fruit. Volume for blackberries is picking back up as we enter mid-October, and have good, steady volume for the rest of the year. Watsonville Blackberries look decent, are medium sized, and have a good flavor. Attached calyx and red cell regression is a continual occurrence, and we are seeing some issues with smaller fruit. Overall production volume has taken a steep cut as we enter the low of the season. The season could be ending soon—limited availability.

Raspberries: Weather has been relatively pleasant as temperatures have cooled down in all Mexican regions as we enter the Fall season. We are seeing temps in the mid 70's to low 80's and nights in the low 60's. Hurricane John made its presence known ten days ago, with rain coming to some of the growing regions in Michoacan. Overall, fruit is looking good with a strong red color, with some fruit with lighter in color in the pack due to picking a bit early ahead of the heat. Sizes are mostly medium with larger berries here and there. Growers do see some overripe and crumbled fruit, but crews are doing their best to keep them out of the packs. The volume for raspberries is staying steady as we enter October. Watsonville raspberries' production is picking back up as we get a second wind through October. Overall, the color is a nice dark red color due to the warm temperatures underneath the hoops, and the sizing of raspberries are a good medium size on average—ok-to-good availability.

Blueberries: EXTREME The blueberry market faces a significant imbalance, with demand far exceeding supply. In the last five days, blueberry availability has dropped considerably as the domestic season comes to a close. Delays in imports from Peru and Central Mexico are anticipated, likely leading to a supply shortfall and lower overall volumes than initially projected for mid-October. For the next 2- 4 weeks, supply levels are expected to remain critically low until substantial shipments arrive from Peru and Central Mexico. During this timeframe, we will see significantly higher markets.

Citrus

Oranges: EXTREME The California Valencia orange crop is reaching the end of the season. Many shippers have finished and those that are still harvesting are facing extremely light supplies. Expect prorates to increase as we continue through the balance of the Valencia season. Navel season is projected to start with very light production the week of Oct 21st. Navel quality is looking very good with sizing projected to run heavier to the 88's, 113's and 138's to start the season.

Lemons: WATCHLIST: California District 3 has started with increasing supplies and quality coming from the Desert growing regions. Light supplies will continue in district 2 as the season is winding down with district 1 lemons starting mid-November. Import Lemons are nearing the end of the season. Market is steady.

Limes: EXTREME ON LARGE SIZES Sizing continues to run heavy to smaller sizing with 230's and 250's being the higher percentage of the volume arriving from Mexico. We are still seeing prorates on large sizes but there is a slight increase in supply on larger sizes. We continue to see some quality issues with light coloring and skin breakdown, but quality has improved significantly. We are still seeing a substantial price gap between larger and smaller sizes, but the market should stabilize as we get through the month of October. Long Range outlook: Due to growers having to get into fields early, we could see another significant overall shortage in production starting in late November and extending into December. More to follow on this as we get further into the New Crop season.

Imports/Specialties: California Mandarins will start November 1st.. We continue to see a gap in California Grapefruit, which will last for another 10-14 days.

West Coast Lettuce

Iceberg:-WATCHLIST-Lettuce has good supplies right now but with the recent warming trend, growers are forecasting for yields to decline along with quality. Things seem to be tightening up a bit so this item is now on the watchlist. Some growers will see a little relief with the transition to Huron but other growers will be riding it out in Salinas and we will see the effects of that soon. Quality looks good but with the rain and the warmer temps, we will be watching out for tip burn, more of a medium size and some minor quality issues,

Iceberg VA: Quality and supplies both look good for now but we will be keeping an eye on that warmer weather and how it will affect these crops.

Romaine, & Romaine Hearts: WATCHLIST Romaine, and romaine heart supplies are good but the heat is going to be a factor for this crop. Growers do expect yields to start dropping. With fall approaching and the warmer than normal weather, yields will be affected. Quality looks good but we are concerned with some internal burn from the warmer weather. Quality will likely be affected.

Green Leaf and Red Leaf WATCHLIST: Overall quality is fair. Supplies have decreased and we are seeing some mildew damage. The heat is hindering harvest and is reducing yields and there is potential for wilting and potential product burning. These items could be very effected depending the severity of the heat.

Butter: Production in Salinas Valley is steady. Overall, the quality is good.

Eastern and Western Vegetables

Green Bell Pepper: WATCHLIST Markets are firming as local supplies wind down for the season in the east. Out west the valley is mostly done relying on Oxnard and Coastal Pepper. The desert is still a few weeks out. Markets are very tight in the west. Quality is hit and miss.
Color Bell Pepper: Improving volume on Red and Yellow Pepper this week. Supply out of Canada and Mexico are stable; Orange pepper availability was lighter this week. Quality is good.

Mini Sweet Pepper: Supply stable this week loading in California.

Mixed Chili Pepper: ESCALATED Supplies in general are good across most varieties out of Mexico and California on Jalapeno, Serrano and Poblano...Fresnos also seem to be improving. Caribes, Habanero and Shishito were the shortest this week. We still expect supply GAPS in the east due to weather.

Eggplant: WATCHLIST Tighter supply from all domestic growing regions is putting upward pressure on price and there are very limited crossings available in Nogales and McAllen. We suspect markets will be hit and miss now through early November.

Slicer Cucumbers: Supply slowly improving this week crossing through Nogales and McAllen. Domestically, we may see some supply GAPS due to Hurricane Hellene in South Georgia over the coming weeks. Local regions are mostly done. Overall quality is good.

English Cucumbers: Light Supply and good quality will be available this week. FOB prices remain high this week.

Pickles: Supply and quality are good this week.

Green Beans: WATCHLIST Supply remains light this week and quality hit and miss due to weather-related pressure.

French Beans: Production remains good, but rain may affect quality and shelf life on the east coast. Out of the west, volumes remain fair with good quality.

Zucchini/Yellow Squash: WATCHLIST Supply remains hit and miss in the south while plentiful in Nogales and California. Heat in the west is pro-longing the season. Quality is good. We will start to transition to Fall crops over the next 2-3 weeks.

Herbs

We have started to see quality and insect issues in basil production. Imported chervil production is still low due to the weather. Thyme is being affected by the weather in Mexico, Peru, and Colombia.

HERB	SUPPLY	QUALITY	COUNTRY OF ORIGIN
Arugula	Steady	Marginal	USA
Basil	Steady	Steady	USA/MEX

Thyme	Steady	Steady	USA
Lavender	Steady	Steady	USA
Lemon Thyme	Steady	Steady	USA
Lime Leaves	Steady	Steady	USA

Melons

Cantaloupe: Production will be winding down and slowly transition to the desert this week. Currently we are seeing primarily 9's out of the fields; Quality remains solid with good sizing, decent color and brix levels holding in a range of mostly 12-16%. Yuma production looks to start off strong with a good distribution of 9's and 12's.

Honeydew: Current crop is seeing some scarring but internally remain very good; this should clean up after we transition to the desert. Currently we are harvesting a decent spread of sizing (5/6s) We are seeing strong brix levels continue right around the 12-14% levels.

Watermelon: Lighter supply available and demand is light. Fruit is being harvested from a number of regions: California, Texas as well as Mexico. Summer regions are starting to wind down and will all transition South to either Mexico or Florida.

Mixed Vegetables

Artichokes: EXTREME Supplies remain limited and will continue to be tight for the next few weeks. The market is still at the extreme trigger on the 12ct, 18ct and 24ct and still escalated on the other sizes. Growers are holding to averages. Quality is good.

Arugula: WATCHLIST-The heat is already causing issues with Arugula and we are already seeing lighter supplies. We are adding this one to the watchlist.

Asparagus: ESCALATED Southern/Northern Baja production is still very low. We should see an increase once weather improves. Volume of bigger sizing is still very low. Peruvian volume remains the same, still heavy on small and standard sizing. Southern Peru continues to open more fields, and we should see better production within the next two weeks. Markets are still very active on all sizes.

Bok Choy: EXTREME Quality is good but supplies are still limited. The light supplies are driving the market.

Broccoli/Broccoli Crowns: ESCALATED Quality is good but some growers are still seeing lighter supplies. Insect intrusion is heavily limiting what will be harvested. Diamondback moth damage and larvae is still causing issues. Supplies are going to be limited for some growers for the rest of the season in Salinas. If you are getting your product from MX, you may still be betting prorated.

Broccolini and Sweet Baby Broccoli: WATCHLIST- Quality is good but supplies are getting tight with most growers. Expect to see some heavy prorating on this item from some growers. The heat in the Salinas valley is causing stress on the plant and that is causing the yields to be low. Expect this item to be an issue throughout the month. Demand is very strong, and supplies are limited.

Brussels Sprouts: Quality and supplies both look very good.

Carrots: (JUMBOS, MEDIUMS and CELLOS): WATCHLIST - Jumbo Carrot supplies are light, but supplies remain steady on all other sizes and packs with good Quality.

Cauliflower: WATCHLIST Supplies are okay for now but quality is just okay. We are seeing similar insect damage as we have in broccoli. Cauliflower will remain on the watchlist as the Diamondback moth continues to affect harvesting and the heat becomes more of an issue.

Celery: Quality and Supplies are okay. There are some heat issues and insect pressures.

Cilantro: ESCALATED The market is active and supplies are very tight. High demand has continued. Growers should be able to cover normal volumes.

Corn: WATCHLIST Currently supply is hit and miss in the east due to transitional gaps and poor quality is prevalent due to insect pressure. We are still assessing losses but expect a major impact to the fall corn supply out of South Georgia and Florida from recent Hurricane dames. In the west, supply will be light until Mexico ramps up in November. Markets remain firm this week expected to go higher.

Fennel: ESCALATED The fields are seeing lower yields and therefore there is a shortage in supply. Pricing will stay escalated until supplies improve.

Leeks: ESCALATED:- Leeks are very tight right now and some growers are holding to averages. The market remains escalated and will likely stay that way for the remainder of the Salinas season.

Garlic: New crop California Garlic has started. The quality is very good with very good demand.

Ginger: Supplies and market are steady

Green Cabbage: ESCALATED- Supplies are very limited and quality is fair. The damage from the Diamondback moth has limited the harvesting in the fields. There are some growers who will be heavily prorating orders that are not meant for concept business. Growers are doing their best to cover things but expect to see escalated pricing and prorating throughout the next few weeks.

Green Onions: EXTREME Supplies are very limited. Prices are still at the extreme trigger and growers will be still holding to averages if they have product. Some growers do not have any product at all and are cutting orders. A Market Alert was sent out on this item. Expect this item to have issues throughout the month.

Mushrooms: ESCALATED Supply was lighter this week, particularly on Cremini's and Ports. In the west growers from Canada to California are dealing with supply shortfalls across the entire category due to weather impacts as well as virus pressure. We expect to see improved availability in approximately 4 to 6 weeks.

Napa Cabbage: ESCALATED Quality and supplies are improving but there is some insect pressure.

Parsley: ESCALATED (Italian): Supplies are improving quality is fair. The Curley Parsley is no longer escalated, and the Italian is coming down. This item should see some relief soon.

Rapini: Quality is good, but supply continues to be light. The market is strong and therefore the supplies will continue to be light.

Red Cabbage: WATCHLIST Pricing is no longer escalated. Quality is good but supplies continue to be tight. The market remains very active, so this item will remain on the watchlist.

Spinach: ESCALATED- Supplies are okay for now but we are seeing some insect damage and inconsistent sizing. We are waiting to see how the heat will affect the overall supply. Pricing is now escalated.

Spring Mix: Supplies are good with very good quality.

Snow Peas and Sugar Snaps: Guatemalan snow peas and sugar snap peas production has decreased due to rain. Peruvian production is also down. Out of the west, the production of snow peas is steady, but sugar snap pea production is very limited. Both markets have reacted slightly, and we can expect higher prices next week.

Onions: ESCALATED

The onion market has stayed steady. The Northwest is continuing to ramp up volume on all colors and sizes. Size profiles continue to peak on medium and jumbos on yellows, with colossal and super colossal few and far between in the early volumes, although they are starting to improve. There is a belief that this may be the pattern for the entire season, however, it is still early to tell. The cause of this would be the extremely hot summer they experienced here. We are still seeing reds and whites remain elevated, although they should begin to see some relief in the next few weeks. Yellows appear to have stabilized for the minute. There are still more shippers to enter the market, so we will see if the added supply will provide downward pressure. White onions are beginning to soften some as well as we are seeing growers begin to build up inventory of those. The overall 'feel' of the market is beginning to take shape, and it is believed to

be a mostly average year for the most part. We will likely see a few lows and a few highs throughout the deal. There is concern about what demand may be like as we ramp up to the election. Historically speaking, demand takes a hit due to various external factors that have happened in the last few election seasons. We are also seeing trucks tighten up some with rates beginning to increase. We do not feel that freight will go any lower than it is today as we head into Q4.

Potatoes:

We are exclusively into new crop potatoes at this point in Idaho. The market took a significant increase between last season's old crop prices and the new crop Norkotah prices at the current market. We will likely see this situation remain in effect for another few weeks until additional shippers enter the market and inventories begin to build up. We are currently seeing a much bigger size profile than we have last year. 40ct through 70ct appear to be in good supply throughout the state, and 80s and smaller are on the tighter side. While this should differ some throughout the year as growers switch between lots, it does tell a story that the tuber counts are a lot lower this year than last year, which will mean less overall supply. We expect we will see the market dip in the short term on large size counts, but as we get into the new calendar year, we do expect to see a price increase. This should be the general pattern for next year as production and pack-outs will only worsen as we get later into the season. We anticipate that we will 'feel' this shortage as we get to about March of next year. There is concern about what demand may be like as we ramp up to the election. Historically speaking, demand takes a hit due to various external factors that have happened in the last few election seasons. We are also seeing trucks tighten up some with rates beginning to increase. We do not feel that freight will go any lower than it is today as we head into Q4.

Tomatoes: East Coast

- **Round, Romas and Snacking Tomatoes: EXTREME** Over the past week the East Coast experienced significant impacts of Hurricane Hellene and Hurricane Milton; the entire southern tomato crop from Tennessee/ North Carolina to Florida have seen catastrophic flooding and crop loss. Growers will be assessing losses over the next several days. Fortunately, we are seeing decent production out of Quincy, Bainbridge and Alabama but expect that to only last another three weeks tops. We anticipate active markets and short availability on volume over the next 6 to 8 weeks depending on the extent of the damage done in Immokalee and Ruskin.

Tomatoes: Mexico

- **Round Tomatoes: ESCALATED** Growers are dealing with quality and supply issues out of Jalisco; the best quality is being harvested on the Baja but the volume will be down as they are wrapping up older blocks. Vizcaino will scratch this week but until then volume will be light as will the volume crossing from McAllen, We expect to see volatile markets continue through October where we will see flushes of fruit then tighten back up once again until November.
- **Roma Tomatoes: ESCALATED** Very light volume crossing through Otay and McAllen this week as growers transition from Summer to fall regions. Still the best quality is crossing through Otay. The volume is expected to be below normal for the next two weeks; overall markets will be very active due to the losses on the east coast and demand moving to Mexico.
- **Grape Tomatoes:** Good supply available and quality is very nice.
- **Cherry Tomatoes:** Steady supply and good quality available crossing through McAllen and Nogales.
- **Medley Grape Tomatoes:** Good supply available this week and quality is good.
- **Tomato on the Vine:** Steady volume available this week.

California Tomatoes – EXTREME

- California will continue production and hopefully be able to compensate for some of the losses felt on the East Coast Post-Hellene. Unfortunately, the long-term forecast is for supply to be well below normal due to the damage caused by California's extreme heat earlier this summer. The season is still expected to run through the middle of October; however, we need to be cautious of quality and supply shortfalls.

Other Fruit:

Apples: Last year, Washington State Apple growers shipped just over 136 million boxes of Apples. This year's total is projected at 124 million. Prices will likely be higher this year and much more manageable of a crop.

Projections below

Red Delicious – 4 million down from last Season

Gold Delicious – 280,000 boxes down from last Season

Gr Smiths – 1.1 million boxes down

Fuji – 1.5 million boxes down

Gala – 3 million boxes down

Honeycrisp – 5 million boxes down

Cosmic – Up 2.7 million boxes.

Pears: The Northwest Pear Crop (Washington/Oregon) is substantially down from last season due to below average temps in late Feb/early March affecting bud development. The higher elevation areas in Washington were severely impacted, especially the Wenatchee Valley. The Oregon Growing Region was not affected as much as Wenatchee, Washington, but it was still impacted.

The Bartlett Crop out of the Northwest shows 3.8 million shipped last season vs a projected 2.9 million this year for a 14% decrease. It's not substantial in terms of overall volume, but it's still a factor. The cold temperatures will affect the grade, so more Fcys will be packed than normal. Because the crop is smaller, the size profile has increased by 1 to 2 sizes. Barts to finish by the end of Feb./ first part of March.

Anjous report at least a 30% total decrease, or 1.85 million boxes less than last year. Also, out of the Wenatchee Valley, there will be more fancy and, for the first time in many Years, a 3rd grade anjous packed. When we start to pack Anjous – I will share pics of 3rd grade, this will be Your value pear. Anjous to start the week of September 16th, and if growers make it through June I will be surprised.

Red Anjous are down 7% or 47,000 boxes, so it is nothing dramatic like the others. The question on Red Anjous is whether or not we will see smaller pears such as 120/135cts. Red pears are supposed to be 1 to 2 sizes larger out of the PNW. Red pears have started with Starkrimsons and will transition into Red Anjou from November through May.

Bosc are down 63% out of the great Northwest or 1.38 million boxes. This variety was mostly affected, and markets will be much higher than in previous years. Bosc has slowly started with a potential end date last January/middle of February.

Pomegranate: Good supply available this week.

Asian Pears: Peaking in volume Quality is outstanding

Tree Fruit: Lighter supply available as the season winds down on Paches; Nectarines are mostly done for the season. Good volume available on red and black plums through October

Kiwi Fruit: Supplies are tight out of Chile and markets are firming up.

Persimmons: Active markets and quality is good on both Hachiya and Fuyu

Quince: Starting to harvest.
